

# AGRITUF FITTING GUIDE: CULTIVATOR SWEEPS – KNOCK-ON

Guide compatible with John Deere Permaloc and Nichols adaptors

1  
Ensure you are using the correct sweep for your adaptor. Fit a new pin or clip with every sweep installed.

2  
Push the sweep onto the adaptor until it is fully engaged on the pin or clip. This should be possible by hand.

3  
Note: Do not strike the sweep directly with a steel hammer. Agrituf's unique metal blend is not designed for direct impact and may crack if hit with a steel hammer.

If a hammer is required, use a rubber hammer. If you must use a steel hammer, place a block of wood between the hammer and the sweep to prevent steel-to-steel contact and protect the sweep.

## TO REMOVE THE SWEEP

1. Use the Agrituf removal tool.
2. Ensure the pin on the tool is engaged with the pin or clip.
3. Strike the area marked with the Agrituf icon using a deadblow or rubber hammer to release the sweep.

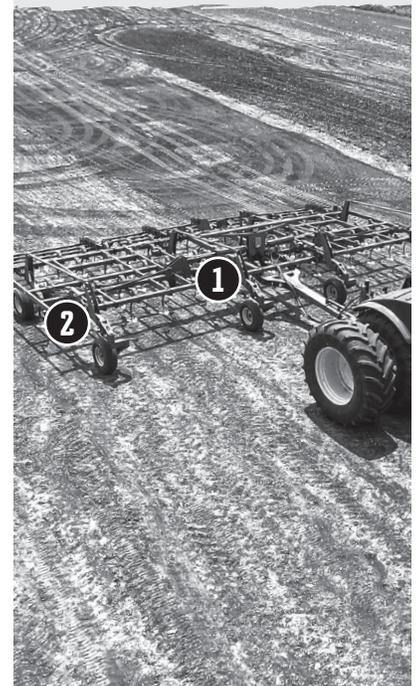

## TRIAL PARTS PLACEMENT

# MAKE AGRITUF DO THE HARD YARDS

To see what Agrituf can really do, fit trial parts in the highest wear zones on your machine:

1. Behind the wheel track
2. On the outer edge

## GENERAL CARE

Agrituf's superior edge is thanks to engineering and our unique metal blend. Here are our tips to keep Agrituf points performing at their peak.

### TREAT 'EM LIKE A BABY

Agrituf points are tough. But they're for soil. Not concrete and other man-made surfaces. Dropping them on those could cause damage.

### KEEP MAINTENANCE UP

While Agrituf points will outlast our competitors, they do still wear. To get the best results, regularly check and maintain your equipment – it'll pay off.
